

Roger TETRA App

Elevating TETRA to the Smart Level

Roger TETRA App delivers the core functionality of a TETRA handheld radio through a modern smartphone application, setting a new benchmark for professional communication.

- ✓ TETRA capabilities on Android & iOS
- ✓ Encrypted real-time group & individual voice
- ✓ Built-in digital maps
- ✓ Push-to-Talk for broadband & radio
- ✓ Secure messaging (text, status, FMS) with E2EE
- ✓ Easy integration via DF-Stecker (df.gateway) & radio-over-IP (IPRU)

By moving essential TETRA features to smart devices, it reduces hardware needs, **streamlines operations**, and **speeds up deployment**.

The app **supports** both **group and individual calls** in simplex or duplex mode. **SDS** and **status messages** can be sent to individuals or groups, with all conversations clearly organized in chat-style histories for easy reference.

Smooth integration with BOS and private TETRA networks is achieved via **DF-Stecker** (df.gateway) and **radio-over-IP** units (IPRU).

Contacts are automatically synced from the organizational structure, eliminating the needs for manual updates. Call history allows for communication review and improves coordination in the field.

Roger TETRA App brings together TETRA reliability and smartphone features to make daily tasks **easier, faster, and more efficient** in mission-critical operations.

All voice and data communications are secured with **end-to-end encryption (E2EE)**.

System requirements

Android	Version 14 or higher
iOS	Version 15 or higher
